

ENC's Living Green Series features "Going Solar"

Greenhouse gas emissions are reaching a new low while renewable sources of energy are continuing to grow and power our lives. However, with an increased focus on wind and solar energy, we are left with a lot of questions unanswered. How will this impact me and my family? How expensive will these energy changes be?

The Living Greener Series will give you ideas to help build a more sustainable future.

The Environmental Nature Center (ENC) is presenting "The Living Greener Series: Going Solar" on Thursday, July 19 from 6 - 7:30 p.m. Join the discussion on the future of renewable energy and specifically how it will affect households and their energy budget. The energy market is changing, and the ENC is here to dispel the confusion and light the way for a greener future!

This Living Greener event is sponsored by Sunrun.

The Living Greener Series helps individuals understand what it means to be "living green" in their own communities. Join ENC to learn strategies to implement in your life that will help you save money while conserving natural resources for future generations. We all make day-to-day decisions that impact our natural resources. These decisions ultimately determine the health of a community. The focus is to illustrate "green" practices that are easy to implement, which in many cases will also save you money. It is the hope to inspire you to take local action and make a difference.

The cost is free for ENC members and \$5 for non-members. Register at www.encycenter.org.

Environmental Nature Center is located at 1601 E. 16th St., Newport Beach.
